Martin Segnini

Full Stack Developer · React · Node.js · MongoDB

Argentina · Remote (UTC−3) · tinchosegnini@gmail.com · linkedin.com/in/martin-segnini · github.com/IsTincho · tincho.pages.dev

SUMMARY

Full stack developer with **systems of my own in production, processing real money**. Technical co-founder of ZAIGEST, a multi-tenant real-estate SaaS with AI, live with a real estate agency as its client. I own the full cycle: architecture, data modeling, frontend, payments and tax invoicing, deployment and operations. University Technician in Programming (UTN FRRO).

TECHNICAL SKILLS

Languages	JavaScript (ESM), TypeScript, C#, SQL, HTML5, CSS3
Frontend	React 18, Vite, React Query, Redux Toolkit / RTK Query, Tailwind, Framer Motion, PWA
Backend	Node.js, Express, REST APIs, JWT, bcrypt, middleware (auth, multi-tenancy, rate limiting), cron jobs, Zod
Databases	MongoDB (Mongoose, compound indexes, aggregation pipelines, multi-tenant isolation), MySQL, Entity Framework
Integrations	Mercado Pago, AFIP e-invoicing (SOAP / WSAA), WhatsApp Cloud API, Groq LLM, Cloudinary, HMAC-signed webhooks
DevOps & tooling	Cloudflare Pages, Railway, MongoDB Atlas, Firebase, Render, GitHub Actions, DNS, Git, Postman, pnpm monorepos
Applied AI	Shipping LLMs to production, prompt design, RAG, MCP (Model Context Protocol), agentic development workflows

EXPERIENCE

Technical Co-founder / Full Stack Developer — ZAIGEST

2026 — Present · Argentina · Remote · zaigest.com.ar · 48 REST routers · 15+ MongoDB entities · 80+ React components

- Designed and built end to end a **multi-tenant real-estate management SaaS** now in production, with a real estate agency running its daily operation on it: contracts, settlements, receipts, leads, listings, finance and self-service portals.
- Multi-tenant architecture with **isolation enforced per query by empresaId**, not just in the UI. JWT auth, tenant middleware, plan guard, rate limiting and security hardening (escapeRegex, express-mongo-sanitize, per-endpoint body limits, secrets management).
- Implemented **AFIP electronic invoicing** (SOAP / WSAA, RG 5616 and 4291) with per-company certificates encrypted using AES-GCM.
- Integrated **Mercado Pago payments and WhatsApp Cloud API notifications**, both with HMAC-verified webhooks over the raw body and carefully ordered middleware.
- Shipped **8 AI capabilities on Groq LLM** — document OCR, delinquency scoring, contract generation, appraisal and SEO descriptions — with a model fallback cascade, backoff retry on 429, and the API key kept server-side.
- Cut the initial bundle from **815 KB to 369 KB (−55%)** through route-level code splitting.

Freelance Full Stack Developer — Private clients

2024 — Present · Argentina

- Built and operate **KingsLV**, a multi-store e-commerce platform in production **processing real payments**: two brands on a single codebase and one checkout (kingslvstore.com).
- Mercado Pago checkout with Wallet Brick and a **constant-time HMAC-SHA256 verified webhook**, plus server-side stock validation.
- Optimized image delivery via Cloudinary: from 2–5 MB down to 30–100 KB per asset, **~95% lighter**.
- Built a custom 10-section back office so the client runs the business without depending on me. Requirements gathering, custom interface design and MySQL database optimization.

PROJECTS

ZAIGEST — Real-estate SaaS with AI (in production)

2026 — Present · zaigest.com.ar

- Full multi-tenant real-estate CRM with electronic invoicing, online payments and 8 AI modules.
- React 18, Vite, Node.js, Express, MongoDB Atlas, Groq LLM, AFIP SOAP, Mercado Pago, WhatsApp Cloud API, Cloudflare Pages, Railway.

KingsLV — Multi-store e-commerce (in production, real payments)

2025 · kingslvstore.com

- Two brands, one codebase, one checkout. Mercado Pago gateway, custom back office, and ~95% lighter assets.
- React 18, Node.js, Express, MongoDB, Redux, React Query, Cloudinary, Firebase, Render.

Club Fans Remeras — E-commerce with shared schemas

2025 · cfr-repo.pages.dev

- pnpm monorepo with a **@cfr/schemas** package: a single Zod definition validates client and server, with no drift between layers.
- Checkout with stock and price integrity: the server recalculates prices and decrements stock atomically (409 anti-oversell), with a denormalized order snapshot so the historical receipt stays immutable.
- 27 REST endpoints, 20+ Zod schemas. React 18, Vite, Redux Toolkit, RTK Query, Tailwind, Express, Mongoose.

Vectorga Quiz — Web game with no frameworks

2026

- Audio and thumbnail guessing quiz in vanilla JavaScript: no frameworks, no build tools, shipped as a single standalone HTML file.
- Audio and effects synthesized live with the Web Audio API; hybrid loading with a YouTube API refresh every 12 h.

EARLIER EXPERIENCE

IT Technician — Private clients

2020 — 2021 · Argentina · PC assembly, configuration and maintenance, software installation and malware removal.

EDUCATION

University Technician in Programming — UTN FRRO

2022 — 2024 · Rosario, Argentina

Junior Web Developer — #YoProgramo

2021 · Online, completed

Professional and Personal IT Technician — ETTP N°394 "Dr. Francisco de Gurruchaga"

2016 — 2021 · Argentina

LANGUAGES

Spanish	Native
English	Intermediate. I read and write technical documentation and work with English-speaking teams in writing.

ADDITIONAL

- Full-time streamer and verified Kick.com Partner, part of the gaming creator group **Los Vectorgas**. I built KingsLV for my own audience: I understand the product from the user's side, not only the builder's.
- Available immediately. Open to remote or on-site work.
